Electronic Data Interchange

Trading partner management
- Maintain transaction details and options for each customer or vendor
- Set up an unlimited number of trading partners
- Share trading partner profiles among different divisions of your company
- Use different trading partner profiles for the same vendor/customer if necessary
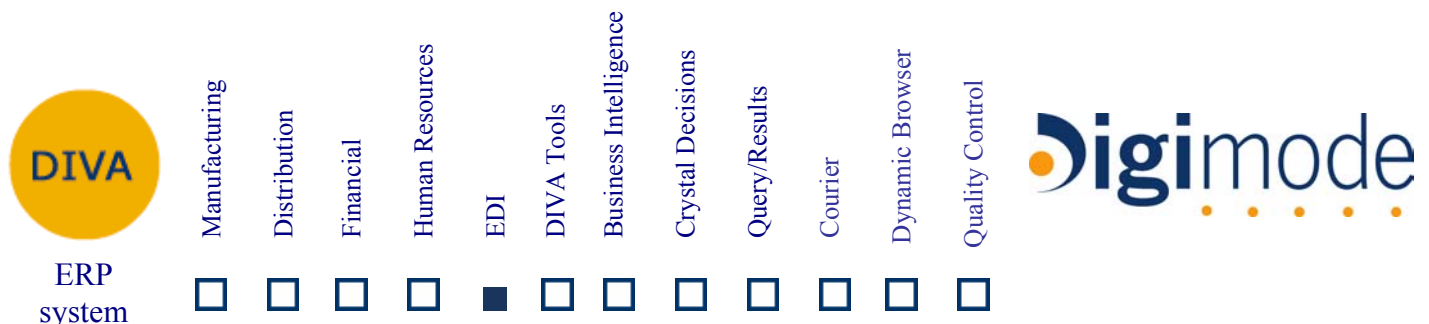

Outbound documents and acknowledgments
- Send advance ship notices (856) and invoices (810)
- Track inbound acknowledgments from trading partners for each document sent
- Batch outbound documents for transmission
- Retransmit documents individually or in batch

Inbound documents
- Receive purchase orders (850), purchase order acknowledgments (855), purchase order changes (860), remittance advices (820), text messages (864) or error messages (824) and much more
- Automatically send acknowledgements for received documents
- Automatically convert inbound purchase orders into quotations or sales orders
- Edit and print ("rip and read") incoming transactions before processing
- Automatically add century digits when processing incoming two-digit dates
- Process incoming documents in simulation mode to verify setup
- Review error transactions before processing

Application integration
- Map individual database fields to document fields and vice versa
- Define maps for all trading partners or for each trading partner
- Use pre-configured maps for all standard ANSI X.12 documents
- Automatically translate unit of measure, currency and other codes between EDI documents and application formats
- Setup tables to translate your data to/from trading partners' standards (e.g., use your part numbers on purchase orders and automatically translate to vendors' part numbers before transmitting)
- Manipulate inbound and outbound data with formulas up to 240 characters long (formulas can be refer to database files, fields, constants, other formulas and PROGRESS functions)
